Project De Technology Stack (

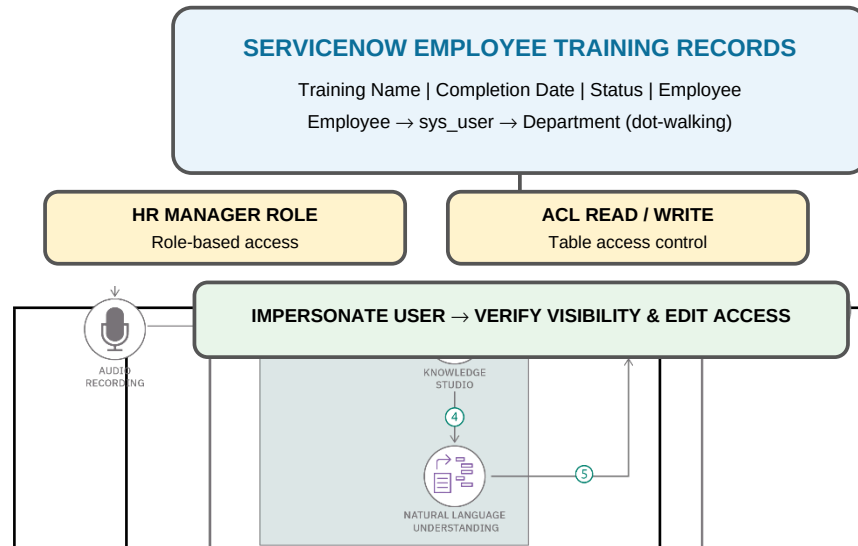

Date	Import Data using Transform Maps (Spreadsheet)
Team ID	4 Marks
Project Name	
Maximum Marks	4 Marks

Technical Architecture:

I the information as per the table1 & table 2

[end-system-for-order-processing-during-pandemics/](#)

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

1. User Interface

ServiceNow web interface used by administrators and authorized users to manage employee training records.

ServiceNow UI / Web Browser

2.	Application Logic-1	Logic for a process in the application	Java / Python
3.	Application Logic-2	Logic for a process in the application	IBM Watson STT service
2.	Application Logic-1	Logic for importing spreadsheet records into the target table.	ServiceNow Import Sets
3.	Application Logic-2	Maps source spreadsheet fields to target table fields.	ServiceNow Transform Maps
4.	Application Logic-3	Links employee records and accesses related department information.	Reference Fields + Dot-Walking
5.	Database	Stores Employee Training records and references users.	ServiceNow Tables / sys_user
6.	Cloud Database	Platform-managed data storage for ServiceNow application records.	ServiceNow Platform Database
7.	File Storage	Spreadsheet file used as the source for importing training data.	XLSX Spreadsheet
8.	External API-1	No external API is required for this project.	Not Applicable
1.	Open-Source Frameworks	ServiceNow platform configuration and scripting features are used; no separate open-source framework is required.	ServiceNow Platform
2.	Security Implementations	Role-based access, ACL Read/Write controls, Security Admin elevation, and user impersonation testing.	ServiceNow ACLs / Roles / Impersonation
3.	Scalable Architecture	Centralized cloud platform separates data, application configuration, roles, and access controls.	ServiceNow Cloud Architecture
4.	Availability	Application is hosted on the ServiceNow platform and accessed through the web.	ServiceNow Cloud / Web Access
2.	Security Implementations	List all the security / access controls implemented, use of firewalls etc.	e.g. SHA-256, Encryptions, IAM Controls, OWASP etc.
3.	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	Technology used
4.	Availability	Justify the availability of application (e.g. use of load balancers, distributed servers etc.)	Technology used

S.No	Characteristics	Description	Technology
5.	Performance	Design consideration for the performance of the application (number of requests per sec, use of	Technology used

5. Performance

Efficient spreadsheet import, field mapping, reference lookup, and ACL evaluation for employee training records.

Import Sets / Transform Maps / ACL Engine
