

Date	03 October 2026
Team ID	6ab75bec02319e850fce1837
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

ServiceNow Employee Training – Solution Architecture

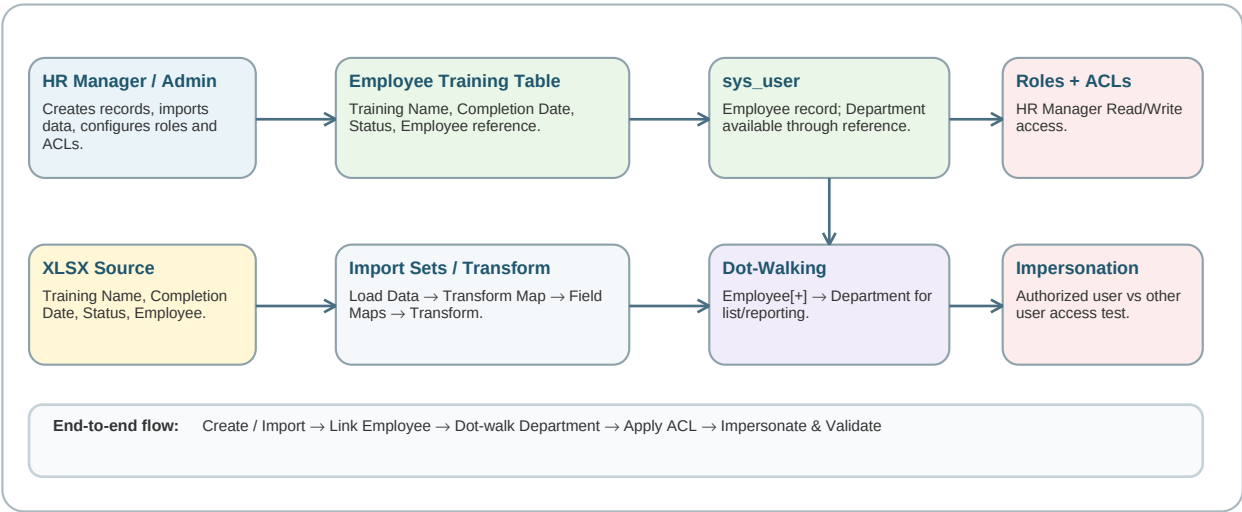

Figure 1: Solution architecture and data flow of the ServiceNow Employee Training Access Control solution

Architecture summary:

The ServiceNow instance is the central platform. Employee Training records reference sys_user, XLSX data is imported through Import Sets and Transform Maps, Department is accessed through dot-walking, and HR Manager Read/Write access is enforced with ACLs and validated through impersonation.
